

THE RACKSPACE® CLOUD

CLOUD SITES™

The Fastest, Easiest Way to Put Sites on The Cloud

- Unlimited Sites, Databases and Email
- Automatic Scalability without Input
- .NET and/or LAMP

STEP ONE: Load it Up

You can create a new site—and even add some email accounts—in less than five minutes. Load balancing, clustering, and redundant storage are all inherited by your application automatically, without any effort.

STEP TWO: Watch it Scale

From the first byte served, your site is hosted on advanced clustered technology designed for high-traffic, high-performance websites. Pay inexpensive scale pricing for exactly what you use when your site becomes popular.

CLOUD FILES™

Unlimited Online Storage and CDN

STARTING AT 15¢/GIGABYTE

- Unlimited, Inexpensive Web Storage
- Powered by a Fast, Tier One CDN
- Accessible via API or File Manager

STEP ONE: Upload Your Data

Cloud Files supports any static content up to 5 GB in size—from backups to images to video files. You can add new content to Cloud Files through our online control panel or programmatically through our API.

STEP TWO: Everything's Automatically Replicated

Cloud Files provides data redundancy by replicating full copies of the data across multiple computers in multiple zones. Zones within our data centers are physically separate from each other, reside on different power supplies/generators, and have separate Internet backbone providers.

STEP THREE: Limelight Brings Your Data to the World

Cloud Files is tied directly into Limelight Networks, so all your content can be distributed to hundreds of endpoints across the world.

CLOUD SERVERS™

Custom Servers On-demand

STARTING AT 1.5¢/HOUR

- On-demand Server Instances
- Complete Flexibility and Control
- Scale Up and Back Down Again

STEP ONE: Build Your Cloud Server

Pull out your credit card, pick your server size and click 'build'. It's that simple.

STEP TWO: Do Your Thing

Ruby on Rails, Python, Django, PHP, Java and more—it's your call. How about an application server? Apache, MySQL, Mongrel—Cloud Servers can run anything you need.

STEP THREE: Save the Day

Need a bigger server? Hit the upgrade button and resize instantly. Want to add servers based on demand? Use our REST based APIs to build servers on the fly. High availability and failover? Design your solutions using our shared IP settings. Cloud Servers solves your problems, magically.

"We have always received excellent customer service support and up-time. I appreciate working with a company that has high standards."

"The Rackspace Cloud rocks... great speed, easy to use interface, and handles billing for me. Couldn't ask for more!"

"I really like the live support chat. I LOVE the control panel! So easy to use. I recommend you to all our clients if they choose to go with their own hosting plan. Also love the fact that I can set up a site with either a Windows or a Unix environment."
